The map displays 2008 National Agriculture Imagery Program (NAIP) orthophotography for the State of Connecticut. It is a natural color, leaf-on, 3.39 inch (1 meter) aerial survey taken on July 3rd, 10th, 11th, 18th, and 19th. The multispectral mosaic is not color balanced so visual differences between individual input images are not preserved. This will create differences in the range and intensity of colors depending on the area viewed. The location and shape of features in other GIS layers will not exactly match information shown in the aerial photography primarily due to differences in spatial accuracy and data collection dates. Street-level data such as major interstates, US routes, state routes, streets, railroads, and ferry crossings are displayed yet may not match the locations of such features on the orthophotography. Also shown are airports, hospitals, educational facilities, train stations, and town boundaries. Important geographic locations and waterbodies are labeled.

DATA SOURCES
ORTHOPHOTOGRAPHY - National Agricultural Imagery Program (NAIP), as provided by the USGS EROS Data Center through the National Photographic Program Office in St. Louis MO.
BASE MAP DATA - This data is based on 1:24,000 scale and displays geographic names, places and other information based on topographic, aerial, and orthophoto. Base map data is neither current nor complete. Street data is based on 1:24,000 orthophotography data.
MAPS AND DIGITAL DATA - Visit the CT DEP website for this map and a variety of other maps.

Map prepared by CT DEP, December 2008. Map is not colorfast.
