This map displays National Agriculture Imagery Program (NAIP) orthoimagery for the State of Connecticut. It is a natural color, false color, 3.79 feet (1 meter) aerial survey taken on July 3rd, 1986, 1990, 1996, and 2000. The statewide mosaic is not color balanced so visual similarities between individual input images are not consistent. This will create differences in the range and intensity of colors depending on the area viewed. The location and shape of features in other GIS layers will not exactly match information shown in the aerial photography primarily due to differences in spatial accuracy and data collection date. Street-level data such as major interstates, US routes, state routes, scenic byways, and ferry crossings are displayed yet many not match the locations of such features on the orthophotography. Also shown are airports, hospitals, educational facilities, train stations, and town boundaries. Important geographic locations and waterbodies are labeled.

DATA SOURCES
ORTHOPHOTOGRAPHY - National Agriculture Imagery Program (NAIP), is provided by the USGS of the US Department of Agriculture through the National Agriculture Imagery Field Office in Salt Lake City.
BASE MAP DATA - All data is based on 1/5000 scale and displays geographic sources, places and names provided in Bureau of Land Management, and Airphoto. These map data is further modified and compiled. Street data is based on, 3.79 feet/1 meter orthophotography data.
MAPS AND DIGITAL DATA - Visit the CT DEP website for this map and a variety of other maps and data. Use the CT DEP website to download the base map digital orthoimagery data used on this map.
