This map displays 2008 National Agriculture Imagery Program (NAIP) aerial orthophotography for the State of Connecticut. It is a color infrared, leaf on, 3.39 foot (1 meter) aerial survey taken on July 3rd, 10th, 11th, 13th, 14th, and 16th. This aerial orthophotography provides many services, such as observing crop and vegetation conditions as well as supporting identification and mapping of habitats. The resolution of the data allows for the mapping of features such as roads, buildings, infrastructure, and environmental features. Variations between individual input images are not corrected so differences are present in the range and intensity of colors depending on the area viewed. The location and shape of features in other GIS layers will not exactly match information shown in the aerial orthophotography primarily due to differences in spatial accuracy and data collection dates. Street-level data such as major interstates, U.S. routes, state routes, major rivers, and city centers are displayed but may not match the locations of each feature on the ground. Important geographic locations and waterbodies are labeled.

DATA SOURCES:
ORTHOPHOTOGRAPHY - National Agricultural Imagery Program (NAIP) is provided by the USDA's Farm Service Agency through the Natural Resources Conservation Service and NASS.
BASE MAP DATA - All data is based on 1/3,000 scale and displays geographic names, places and their symbols, towns, boundaries, airports, and waterbodies. Base map data is neither current nor complete. Street data is based on TeleAtlas copyrighted data.
NAIP AND GOOGLE DATA - Visit the CT GIS website for the map and a variety of other in PDF format. Visit the CT GIS website to download free maps digital spatial data shared on this map.
