2008 Color Infrared Orthophoto
Branford, CT
(East)

EXPLANATION
This map displays 2008 National Agricultural Imagery Program (NAIP) infrared orthophotography for the State of Connecticut. It is a color infrared, leaf on, 1:20,000 scale aerial survey taken on July 3rd, 10th, 11th, 15th, and 16th. This infrared orthophotography provides many services, such as observing crop and vegetation conditions as well as supporting identifications and monitoring of land use and land cover. Despite the general resemblance between individual input images, differences are present in the range and intensity of colors depending on the area viewed. The location and shape of features in other GIS layers will not exactly match information shown in the aerial photography primarily due to differences in spatial accuracy and date collection dates. Street-level data such as major intersections, U-turns, cross streets, minor roads, and thirty crossings are displayed but may not match the locations of such features on the original orthophotography. Buildings, churches, hospitals, educational facilities, rail stations, and some boundaries. Important geographic locations and waterbodies are labeled.

DATA SOURCES
ORTHOPHOTOGRAPHY - National Agricultural Imagery Program (NAIP) is provided by the USDA Farm Service Agency through the National Agriculture Imagery Program (NAIP) and NAIP for CT.
BASE MAP DATA - All data is based on 1:20,000 scale and displays geographic names, places and their symbols, town boundaries, major roads, and railroads. Map may show in roadway network or complete. Street data is based on Towns/State acquired data.
NAIP AND BASE MAP DATA - Visit the CT DEP website to download the base map digital ortho data shown on this map.
