This map displays 2008 National Agriculture Imagery Program (NAIP) color infrared orthophotography for the State of Connecticut. It is color infrared, leaf on, 3.39 feet (1 meter) aerial survey taken on July 3rd, 1996, 1997, 1998, and 1999. This infrared orthophotography provides many services, such as observing crop and vegetation conditions as well as supporting identifications and mapping of features. Leaf-on images are the best color infrared images and differences between individual input images are not corrected so differences are present in the range and intensity of colors depending on the area viewed. The location and shape of features in other GIS layers will not exactly match information shown in the aerial photograpy primarily due to differences in spatial accuracy and date collection dates. Street-level data such as major interstates, US routes, state routes, minor, railroads, and utility crossings are displayed but may not match the locations of such features on the ground. Important geographic locations and waterbodies are labeled.

DATA SOURCES
ORTHOPHOTOGRAPHY - National Agriculture Imagery Program (NAIP) is provided by the USDA's Farm Service Agency through the National Agricultural Imagery Program (NAIP) in 1996-1999.
BASE MAP DATA - All data is based on 1:24,000 scale and displays geographic names, places and their symbols, towns, boundaries, airports, and railroads. Base map data is nowhere complete. Street data is based on Tele Atlas proprietary data.
