This map displays 2008 National Agriculture Imagery Program (NAIP) color infrared orthophotography for the State of Connecticut. It is color infrared, leaf on, 3.29-foot (1 meter) aerial survey taken on July 3rd, 10th, 11th, 14th, and 16th. This color infrared orthophotography provides many services, such as observing crop and vegetation conditions as well as supporting identifications and mappings of wetlands, species, and soil types. Color differences between individual input images is not corrected so differences are present in the range and intensity of colors depending on the area viewed. The location and shape of features in other GIS layers will not exactly match information shown in the aerial photography primarily due to differences in spatial accuracy and date collection data. Street-level data, such as major interstate, U.S. routes, state routes, minor, railroads, and ferry crossings are displayed but may not match the locations of such features on the orthophotography. Important geographic locations and waterbodies are labeled.

DATA SOURCES
ORTHOPHOTOGRAPHY - National Agricultural Imagery Program (NAIP) is provided by the USDA's Farm Service Agency through the Aerial Photography Field Office in Salt Lake City.
BASE MAP DATA - All data is based on 1:24,000 scale and displays geographic names, places and their symbols, town boundaries, property, and railroads. Your map data is neither current nor complete. Street data is based on TeleAtlas copyrighted data.
