This map displays 2008 National Agriculture Imagery Program (NAIP) infrared orthophotography for the State of Connecticut. It is color infrared, false color (1 meter) aerial surveys taken on July 3rd, 10th, 17th, 18th, and 19th. This infrared orthophotography provides many services, such as observing crop and vegetation conditions, as well as supporting identification and mapping of habitats. Differences in the spectral bands between individual input images may cause differences in the range and intensity of colors depending on the area viewed. The location and shape of features in other GIS layers will not exactly match information shown in the aerial photography primarily due to differences in spatial accuracy and date of collection. Street-level data, such as major intersections, US roads, state routes, minor, railroads, and thirty crisscrosses are displayed but may not match the locations of each feature on the orthophotography precisely. Important geographic locations and waterbodies are labeled.

DATA SOURCES
ORTHOPHOTOGRAPHY - National Agriculture Imagery Program (NAIP) is provided by the USDA Farm Service Agency through the aerial photography Flight Office in St Louis, Mo.
ROAD MAP DATA - All data is based on 3-3000 feet scale digital geographic names, places and their corresponding boundaries, majors, and minor roads. Base map data is updated quarterly per completion. Street data is based on Telcel's copyrighted data.
