
This map depicts 2008 National Agriculture Imagery Program (NAIP) orthophotography for the State of Connecticut. It is color infrared, leaf on, 3.39 foot (1 meter) aerial photography taken on July 3rd, 10th, 14th, 19th, and 26th. This infrared orthophotography provides many services, such as observing crop and vegetation conditions as well as supporting identification and mapping of features such as buildings, ponds, and transportation networks. Discrepancies between individual input images is not connected so differences are present in the range and intensity of colors depending on the area viewed. The location and shape of features in other GIS layers will not exactly match information shown in the aerial photography primarily due to differences in spatial accuracy and data collection dates. Manmade data such as majorinterstates, U.S. routes, state routes, minor, railroads, and ferry crossings are displayed but may not match the locations of each feature on the ground. All data layers, excepted the aerial photography, are complete. Street data is based on TeleAtlas copyrighted data.

DATA SOURCES:
ORTHOPHOTOGRAPHY - National Agricultural Imagery Program (NAIP) is provided by the USDA’s Farm Service Agency through the Aerial Photography Field Office in Salt Lake City.
BASE MAP DATA - All data is based on 1:24,000 scale and displays geographic names, places and their symbols, town boundaries, airports, and railroads. Base map data is neither current nor complete. Street data is based on TeleAtlas copyrighted data.
