This map displays 2008 National Agriculture Imagery Program (NAIP) aerial orthophotography for the State of Connecticut. It is color infrared, leaf on, 3.39-foot (1-meter) aerial survey taken on July 3rd, 1988, 1989, 1990, 1991, and 1992. This aerial orthophotography provides many services, such as observing crop and vegetation conditions as well as supporting identification and mapping of human activity in the scene. The orthophotography can be used to examine and analyze the landscape where subtle to nonexistent differences are present in the range and intensity of colors depending on the area viewed. The location and shape of features in other GIS layers will not exactly match information shown in the aerial orthophotography primarily due to differences in spatial accuracy and data collection dates. Street-level data such as major interstates, US routes, state routes, minor roads, and utility crossings are displayed but may not match the locations of such features on the original survey. This orthophotography is used in the display of roads and buildings, restaurants, hospitals, educational facilities, train stations, and home boundaries. Important geographic locations and waterbodies are labeled. 

DATA SOURCES
ORTHOPHOTOGRAPHY - National Agriculture Imagery Program, (NAIP) is provided by the USDA Farm Service Agency through the United States Geological Survey (USGS) Data Policy. 
ROAD MAP DATA - All data is based on 3.39-foot (1-meter) aerial orthophotography. roads and their symbols, minor roads, rivers, streams, and waterbodies. Basic map data is subject to errors, see disclaimer. 
MAPS AND DIGITAL DATA - Visit the CT ECO website for this map and a variety of older in PDF format. Visit the CT ECO website to download the base map digital orthophotography to this map.

EXPLANATION
Map prepared by CT ECO, December 2018. Map is not suitable for survey. Protect from light and moisture.
