This map displays 2008 National Agriculture Imagery Program (NAIP) infrared orthophotography for the State of Connecticut. It is a color infrared, leaf-on, 3.39 feet (1 meter) aerial survey taken on July 3rd, 10th, 14th, and 16th. This infrared orthophotography provides many services, such as observing crop and vegetation conditions as well as supporting identification and mapping of habitat conditions and waterbodies. Important geographic facilities, train stations, and town boundaries are labeled.  

ORTHOPHOTOGRAPHY - National Agriculture Imagery Program (NAIP) is provided by the USDA's Farm Service Agency through the Aerial Photography Field Office in Salt Lake City.  

BASE MAP DATA - All data is based on 1:24,000 scale and displays geographic names, places and waterbodies are labeled. Street-level data such as major interstates, US routes, state routes, minor, railroads, and ferry crossings are displayed but may not match the locations of such features on the aerial orthophotography. Also shown are airports, hospitals, educational institutions, schools, and post offices. Important geographic locations and waterbodies are labeled.  

DATA SOURCES  

- 1,100
- 3,300
- 4,400
- 2,200

EXPLANATION  

Differences are present in the range and intensity of colors depending on the area viewed. The location and shape of features in other GIS layers will not exactly match information shown in the aerial orthophotography primarily due to differences in spatial accuracy and data collection dates. Street level data such as major interstates, US routes, state routes, minor, railroads, and ferry crossings are displayed but may not match the locations of such features on the aerial orthophotography. Important geographic locations and waterbodies are labeled.
