This map displays 2008 National Agriculture Imagery Program (NAIP) infrared orthophotography for the State of Connecticut. It is color infrared, leaf on, 3.29 foot (1 meter) aerial survey taken on July 3rd, 10th, 17th, 24th, 31st, and October 6th. This infrared orthophotography provides many services, such as observing crop and vegetation conditions as well as supporting identification and mapping of habitat diversity, land cover, and vegetation compositions. The variability between individual input images is not centered so differences are present in the range and intensity of colors depending on the area viewed. The location and shape of features in other GIS layers will not exactly match information shown in the aerial photography primarily due to differences in spatial accuracy and data collection dates. Street-level data such as major interstates, US routes, state routes, minor roads, and minor crossings are displayed but may not match the locations of such features in the aerial photography. Points of interest such as churches, schools, hospitals, educational facilities, rail stations, and town boundaries. Important geographic locations and waterbodies are labeled.

DATA SOURCES

ORTHOPHOTOGRAPHS: National Agriculture Imagery Program (NAIP) is provided by the USDA Farm Service Agency through the Joint Orthophotographic Program or JOPP (aka CT-1).

BASE MAP DATA: All data is based on 1:24,000 scale and displays geographic names, places and their symbols, county boundaries, airports, and railroads. Some map data is neither current nor complete. Street data is based on Teloc or proprietary data.

SCALE AND Credits: Visit the CT GIS website to download the base map digital orthophoto data shown on this map.
