This map displays 2008 National Agriculture Imagery Program (NAIP) color infrared orthophotography for the State of Connecticut. It is a color infrared, false color, 3.39 foot (1 meter) aerial survey taken on July 3rd, 10th, 11th, 15th, and 16th. This infrared orthophotography provides many services, such as observing crop and vegetation conditions as well as supporting identification and mapping of habitat areas. The statewide mosaic is not color balanced so tonal conditions as well as supporting identification and mapping of habitat are not consistent. Differences are present in the range and intensity of colors depending on the area viewed. The location and shape of features in other GIS layers will not exactly match information shown in the aerial orthophotography primarily due to differences in spatial accuracy and date collection dates. Street-level data such as major interstates, US routes, state routes, minor roadways, and ferry crossings are displayed but may not match the locations of such features on the orthophotography primarily due to differences in spatial accuracy and data collection dates. Street-level data such as major interstates, US routes, state routes, minor roadways, and ferry crossings are displayed but may not match the locations of such features on the orthophotography primarily due to differences in spatial accuracy and data collection dates.

DATA SOURCES
ORTHOPHOTOGRAPHY - National Agricultural Imagery Program (NAIP) is provided by the USDA's Farm Service Agency through the Aerial Photography Field Office in Salt Lake City.
BASE MAP DATA - All data is based on 1:24,000 scale and displays geographic names, places and their symbols, towns, boundaries, cities, and neighboring areas. This map data is neither current nor complete. Street data is based on TeleAtlas copyrighted data.
MAP PREPARED BY - CT DEP, December 2010.
