This map displays 2008 National Agriculture Imagery Program (NAIP) infrared orthophotography for the State of Connecticut. It is color infrared, leaf on, 3.39 feet (1 meter) aerial survey taken on July 3rd, 10th, 11th, 14th, and 16th. This infrared orthophotography provides many services, such as observing crop and vegetation conditions as well as supporting identification and mapping of herbicide applications. The orthophotography is a high-resolution aerial survey. Differences between individual input images are not corrected so differences are present in the range and intensity of colors depending on the area viewed. The location and shape of features in other GIS layers will not exactly match information shown in the aerial photography primarily due to differences in spatial accuracy and data collection dates. Street-level data such as major interstates, US roads, state routes, minor, railroads, and ferry crossings are displayed but may not match the locations of such features on the road. Orthophotos are of numerous units of government, hospitals, educational facilities, town names, and town boundaries. Important geographic locations and waterbodies are labeled.

DATA SOURCES
ORTHOPHOTOGRAPHY - National Agricultural Imagery Program (NAIP) is provided by the USDA’s Farm Service Agency through the aerial photography NAIP/Heo in NAIP data set.
ROAD MAP DATA - All data is based on 1:24,000 scale and displays geographic names, places and their symbols, town boundaries, parks, and railways. Base map data is neither current nor complete. Street data is based on TDF/CTE/ESRI copyrighted data.

EXPLANATION
Map prepared by CT DEP, December 2010. Map is not to scale. Protect from light and moisture.
