This map displays 2008 National Agricultural Imagery Program (NAIP) infrared orthophotography for the State of Connecticut. It is an infrared, leaf off, 3.39-foot (1 meter) aerial survey taken on July 3rd, 11th, 18th, and 26th. This infrared orthophotography provides many services, such as observing crop and vegetation conditions, as well as supporting identification and mapping of numerous features and objects. The visual interplay between individual input images is not consistent so differences are present in the range and intensity of colors depending on the area viewed. The location and shape of features in other GIS layers will not exactly match information shown in the aerial photography primarily due to differences in spatial accuracy and data collection dates. Street-level data such as major interstates, US routes, state routes, minor roads, and thirty crossings are displayed but may not match the locations of early features on the ground. Only roads, residences, businesses, parks, educational facilities, train stations, and town boundaries. Important geographic locations and waterbodies are labeled.

DATA SOURCES
ORTHOPHOTOGRAPHY - National Agricultural Imagery Program (NAIP) is provided by the USDA- Farm Service Agency through the National Agricultural Imagery and Data Office in Madison, NC.
ROAD MAP DATA - All data is based on 1:24,000 scale and displays geographic names, places, and their symbols, county boundaries, streets, and railroads. Road map data is not complete. Street data is based on Telos/Nav契 acquisition data.
MAP AND GRAPHIC DATA - Visit the CT DEP website to download the base map digital data shown on this map.
