**DATA SOURCES**

- 2008 National Agriculture Imagery Program (NAIP) - Color infrared orthophotography provided by USDA's Farm Service Agency through the Aerial Photography Field Office in Salt Lake City.
- Resampled from NAIP to 1:24,000 scale.
- Orthophotography (color infrared leaf on, 3.39 feet (1 meter) aerial survey taken on July 3rd, 1986, 1991, 1992, and 1996). This orthophotography provides many services, such as observing crop and vegetation conditions as well as supporting identification and mapping of features on the ground. The orthophotography is accurate within 0.5 feet (0.16 meter). Differences are present in the range and intensity of colors depending on the area viewed. The location and slope of features in other GIS layers will not exactly match information shown in the aerial orthophotography primarily due to differences in spatial accuracy and date collection dates. Metadata data such as major interstates, US routes, state routes, rivers, railroads, and ferry crossings are displayed but may not match the locations of such features on the area viewed. The location and shape of features in other GIS layers will not exactly match information shown in the aerial orthophotography. Also shown are airports, hospitals, educational facilities, train stations, and more. Important geographic locations and waterbodies are labeled.

**BASE MAP DATA** - All data is based on 1:24,000 scale and displays geographic names, places and their symbols, town boundaries, airports, and railroads. Base map data is neither current nor complete. Street data is based on TeleAtlas copyrighted data. Street data is complete for the area shown on the map. Street data does not match the locations of such features on the area viewed. The location and shape of features in other GIS layers will not exactly match information shown in the aerial orthophotography. Map prepared by CT DEP, December 2010.

Map is not colorfast. Protect from light and moisture. Map is not suitable for detail purposes. Protect from light and moisture.
