This map displays 2008 National Agriculture Imagery Program (NAIP) aerial orthophotography for the State of Connecticut. It is a color infrared, leaf on, 3.39 feet (1 meter) aerial survey taken on July 3rd, 2008. This aerial orthophotography is provided by many services, such as observing crop and vegetation conditions as well as supporting identification and mapping of features in the field. The color differences between individual input images is not corrected so differences are present in the range and intensity of colors depending on the area viewed. The location and shape of features in other GIS layers will not exactly match information shown in the aerial photography primarily due to differences in spatial accuracy and date collection dates. Street data such as major intersections, U.S. routes, state routes, minor, railroads, and interstate crossings are depicted but may not match the locations of some features on the ground due to data inaccuracy. Major features such as lakes, hospitals, educational facilities, parks, restaurants, and more boundaries. Important geographic locations and waterbodies are labeled.

DATA SOURCES
ORTHOPHOTOGRAPHY - National Agriculture Imagery Program (NAIP) is provided by the USDA’s Farm Service Agency through the Naval Photographic Field Office in Annapolis, MD.
BASE MAP DATA - All data is based on 1:24,000 scale and displays geographic names, places and their roads, towns, boundaries, counties, and rivers. Base map data is not entirely accurate as complete. Street data is based on TeleAtlas copyrighted data.

This map is not suitable for precise land measurement.

Map prepared by CT DEP, December 2010.
