DATA SOURCES
2,200 Color Infrared Orthophoto
2008 National Agriculture Imagery Program (NAIP), color infrared orthophotography for the State of Connecticut. The orthophotography is provided by the USGS and was acquired through the NAIP. The orthophotography is color corrected to improve the color balance between individual input images.

ORTHOPHOTOGRAPIY - National Agriculture Imagery Program (NAIP) is provided by the USGS and was acquired through the NAIP. The orthophotography is color corrected to improve the color balance between individual input images.

BASE MAP DATA - All data is based on 1:24,000 scale and displays geographic names, places and their symbols, town boundaries, airports, railroads. Base map data is neither current nor complete. Street data is based on TeleAtlas copyrighted data.

2008 Color Infrared Orthophoto
Putnam, CT
(West)

EXPLANATION
This map displays 2008 National Agriculture Imagery Program (NAIP) aerial orthophotography for the State of Connecticut. The orthophotography is color corrected to improve the color balance between individual input images. The statewide mosaic is not color balanced so tonal conditions as well as supporting identification and mapping of habitat provides many services, such as observing crop and vegetation conditions as well as supporting identification and mapping of habitat layers will not exactly match information shown in the aerial orthophotography. Also shown are airports, hospitals, educational facilities, roads, railroads, and other features. This is a color infrared, leaf on, 3.39 foot (1 meter) aerial survey taken on July 1st, 18th, 19th, and 20th. The infrared orthophotography provides many services such as detecting crop and vegetation conditions as well as supporting identification and mapping of habitat layers. Color correction between individual input images is not corrected so differences are present in the range and intensity of colors depending on the area viewed. The location and shape of features in other GIS layers will not exactly match information shown in the aerial orthophotography due to differences in spatial accuracy and date collection dates. Street-level data, such as major interstates, US routes, state routes, minor, railroads, and ferry crossings are displayed but may not match the locations of such features on the orthophotography. Important geographic locations and waterbodies are labeled.

DATA SOURCES
ORTHOPHOTOGRAPIY - National Agriculture Imagery Program (NAIP) is provided by the USGS and was acquired through the NAIP. The orthophotography is color corrected to improve the color balance between individual input images.

BASE MAP DATA - All data is based on 1:24,000 scale and displays geographic names, places and their symbols, town boundaries, airports, railroads. Base map data is neither current nor complete. Street data is based on TeleAtlas copyrighted data.

MAPS AND DIGITAL DATA - Visit the CT ECO website for this map and a variety of others in their symbols, town boundaries, airports, and railroads. Base map data is neither current nor complete. Street data is based on TeleAtlas copyrighted data.
