This map displays 2008 U.S. Geological Survey (USGS) high resolution orthophotography for the Bolton, Manchester, and Glastonbury area. The aerial survey was taken during the Spring of 2008 and is an important tool for land use and development planning. It also provides support in property tax review, environmental monitoring, as well as other applications. The orthophoto mosaic is not color balanced, so tonal differences between individual input images can occur depending on the time of year viewed. The location and shape of features in other GIS layers will not exactly match orthophotography due to differences in spatial accuracy, scale, and collection dates. Three input data sources were used to create the orthophotography. Also shown are airports, highways, educational facilities, town stadia, and town boundaries. Important geographic locations and boundaries are labeled.

DATA SOURCES
ORTHOPHOTOGRAPHY - Provided by the U.S. Geological Survey.
BASE MAP DATA - All data is based on 1:24,000 scale and displays geographic names, places and their symbols, town boundaries airports, and roads. Data may not be suitable for engineering, surveying, or legal purposes.
SAND AND DRILLING LOCATIONS - Visit the CT DEP website for this map and a variety of others in PDF format. Visit the CT DEP website to download the free map digital spatial data or this map.
