This map shows 2008 U.S. Geological Survey (USGS) aerial photography for the Bridgeport, Hartford, and New Haven urban areas. The aerial survey was taken during the Spring of 2008 and is an important data source for land use planning. It also provides support in property tax review, environmental monitoring, as well as other applications. Maps are not color balanced so tonal imbalances between individual image tiles can occur depending on the area viewed. The location and shape of features in other GIS layers will not exactly match information shown in the aerial photography primarily due to differences in spatial accuracy and data collection dates. Streets from data such as census tracts that are not intersected with the aerial photography may not be displayed but the locations of such features may differ from the orthophotography. Also shown are airports, hospitals, educational facilities, train stations, and town boundaries. Important geographic locations and waterbodies are labeled.

DATA SOURCES
ORTHOPHOTOGRAPHY - Provided by the US Geological Survey.
BASE MAP DATA - plugs are based on U.S. Census and display geographic names, places and their symbols, town boundaries, airports, and railroads. Base map data is neither current nor complete. Road data is an orthophotograph.
MAPS AND DIGITAL DATA - Visit the CT DEP website for this map and a variety of others in PDF format. Visit the CT DEP website to download the true-map digital spatial data shown on this map.

EXPLANATION
Map prepared by CT DEP, December 2010. Map is not color balanced. Printed from light and exposure.
