

2008 Color Orthophoto Leaf-Off Hamden, CT (North)

EXPLANATION

This map displays 2008 U.S. Geologic Survey (USGS), High Resolution orthophotography for the Bridgeport, Hartford, and New Haven and is natural color, leaf off, 1 foot (0.0305 meter) imagery. The aerial survey was taken during the Spring of 2008 and is an important tool in making development decisions in resource management and city planning. It also provides support in property line review, environmental monitoring, as well as other applications. The statewide mosaic is not color balanced so tonal imbalances between individual input image is not corrected which will create differences in the range

and intensity of colors depending on the area viewed. The location and shape of features in other GIS layers will not exactly match information shown in the aerial photography primarily due to differences in spatial accuracy and data collection dates. Street-level data such as major interstates, US routes, state routes, streets, railroads, and ferry crossings are displayed but the locations of such features may differ from the orthophotography. Also shown are airports, hospitals, educational facilities, train stations, and town boundaries. Important geographic locations and waterbodies are labeled.

DATA SOURCES

ORTHOPHOTOGRAPHY - Provided by the US Geological Survey.

BASE MAP DATA - All data is based on 1:24,000 scale and displays geographic names, places and their symbols, town boundaries airports, and railroads. Base map data is neither current nor complete. Street data is based on TeleAtlas copyrighted data.

MAPS AND DIGITAL DATA - Visit the CT ECO website for this map and a variety of others in PDF format. Visit the CT DEP website to download the base map digital spatial data shown on this map.

Map prepared by CT DEP, December 2010.
Map is not colorfast.
Protect from light and moisture.
