This map displays 2009 U.S. Geological Survey (USGS) High Resolution orthophotography for the Bridgeport, Stratford, and New Haven area in natural color, leaf off, 1 foot (0.0305 meter) imagery. The survey was taken during the Spring of 2009 and is an important tool for planning. It also provides support in property line review, environmental monitoring, as well as other applications. The mosaic style mosaic is not color balanced so tonal differences between individual input images can create differences in the shade and intensity of colors depending on the area viewed. The location and shape of features in other OGS layers will not exactly match information shown in the orthophotography primarily due to differences in spatial accuracy and data acquisition dates. Street names such as streets in the orthophotography are not displayed but the locations of such features may differ from the orthophotography. Also shown are airports, bridges, educational facilities, train stations, and ferry crossings. Important geographic locations and waterbodies are labeled.
