This map displays 2008 U.S. Geological Survey (USGS), High Resolution orthophotography for the Ridgefield, Redding, and New Milford area to aid in land use and planning. It also provides support in property tax review, environmental monitoring, as well as other applications. The multispectral image is not color balanced as tone imbalances between individual spectral images can cause differences in the shade and intensity of colors depending on the area viewed. The location and shape of features in other GIS layers will not exactly match the orthophotography primarily due to differences in spatial resolution and data collection dates. Shapefile data such as topography, hydrography, and railroads are displayed but the locations of such features may differ from the orthophotography. Also shown are airports, hospitals, educational facilities, data stations, and fire boundaries. Important geographic locations and boundaries are labeled.

EXPLANATION

DATA SOURCES

ORTHOPHOTOGRAPHY - Provided by the U.S. Geological Survey.
BASE MAP DATA - All data is based on 1:24,000 scale and displays geographic names, places, and their symbols, town boundaries, airports, and railroads. Base map data is neither current nor complete. Street data is based on TeleAtlas copyrighted data.

MAPS AND DIGITAL DATA - Visit the CT DEP website for this map and a variety of others in PDF format. Visit the CT DEP website to download the free map digital spatial data shown on this map.
