DATA SOURCES

2008 Color Orthophoto Leaf-Off
Greenwich, CT (Northwest)

EXPLANATION

This map displays 2008 U.S. Fish & Wildlife Service (USFWS), High Resolution orthophotography for the Bridgeport, Stratford, and New Haven area in colored leaf off (late autumn) imagery. The aerial survey was initiated during the autumn of 2008 and is an important tool in making development decisions in resource management and city planning. It also provides support in property tax review, environmental monitoring, as well as other applications. The orthophoto mosaic is not color balanced so tonal differences between individual input images to each covered town will cause differences in the shade and intensity of colors depending on the area viewed. The location and shape of features in other GIS layers will not exactly match information shown in the orthophotography primarily due to differences in spatial accuracy and date collection dates. layers used in the project do not completely match existing data displayed on this image and the locations of such features may differ from the original data. Also shown are airports, schools, educational facilities, train stations, and tree boundaries. Important geographic locations and boundaries are labeled.

DATA SOURCES

Orthophotography - Provided by the U.S. Fish & Wildlife Service.
BASIS MAP DATA - All data is based on a 1:24,000 scale and displays geographic names, places and their symbols, town boundaries, airports, and railroads. Base map data is subject to current accuracy. Vector data layers may be displayed but the locations of such features may differ from the orthophotography.

MAPS AND DIGITAL DATA - Visit the CT DEP website for this map and a variety of others in PDF format. Visit the CT DEP website to download the free map digitized spatial data shown on this map.
