EXPLANATION

This map depicts 2008 U.S. Geological Survey (USGS), High Resolution Orthophotography for the Bethel town, decking, and New Haven and is a natural color leaf at 1 foot (30,480 pixel) imagery. The natural colors were taken during the Spring of 2008 and represent the land use and condition as of that time.

The map also provides support in property tax review, environmental monitoring, as well as other applications. The orthophoto mosaic is not color balanced so tonal imbalances between individual input images can sometimes result in color differences in the image and intensity of color depending on the area viewed. The location and shape of features on other (USGS) real or exact match information derived from the orthophotography primarily due to differences in spatial accuracy of these data collection plans. Where both data such as elevation are displayed for the orthophotography. Also shown are airports, highways, educational facilities, train stations, and town boundaries. Important geographic locations and waterbodies are labeled.

DATA SOURCES

ORTHOPHOTOGRAVPHY - Provided by the U.S. Geological Survey.
BASE MAP DATA - All data is based on 1:24,000 scale and displays geographic names, places and their symbols, town boundaries airports, and railroads. These data sets are subject to error and omissions. Local data sources provided by the town of Bethel, the state of Connecticut, the U.S. Federal government, and local town residents.
