2008 Color Orthophoto Leaf-Off
Prospect, CT

EXPLANATION

This map displays 2008 U.S. Geologic Survey (USGS), High Resolution orthophotography for the Bridgeport, Shelton and New Haven area in a color leaf-off format. The aerial survey was taken during the Spring of 2008 and is an important tool for land use planning. It also provides support in property line review, environmental monitoring, as well as other applications. The orthophoto mosaic is not color balanced as tonal characteristics between individual input images in our controlled workflow cause differences in the image and intensity of colors depending on the area viewed. The location and shape of features in other GIS layers will not exactly match information shown in the aerial photography primarily due to differences in spatial accuracy and data collection dates. Shown are data such as major interstates, US routes, state routes, streets, railroads, and ferry crossings. Other data such as taxa and contour are incomplete. Road data are from the USGS Digital Lineage data layer. Data and Digital Elevation - Visit the CT DEP website for this map and a variety of others in PDF format. Visit the CT DEP website to download the free map digital spatial data shown on this map:

DATA SOURCES

ORTHOPHOTOGRAPHY - Provided by the U.S. Geological Survey.
BASE MAP DATA - All data is based on 1:24,000 scale and displayed geographic names, places and their symbols, town boundaries, airports, and railroads. They may also be subject to errors and omissions. Road data are from the New England Transportation Research Center. Other data such as area, buildings, educational facilities, parks, and railroads. Important geographic locations and waterbodies are labeled.

Protect from light and moisture.
