**DATA SOURCES**

ORTHOPHOTOGRAPHY - Provided by the U.S. Geological Survey.

BASE MAP DATA - All data is based on U.S. Census and digital geographic sources, places and their symbols, town boundaries, airports and railroads, major and minor roads and waterbodies. Street data is also provided by various companies. Street data is displayed with an extra 30% buffer. Data accuracy and date are variable.

MAPS AND DIGITAL DATA - Visit the CT DEP website for this map and a variety of others in PDF format. Visit the CT DEP website to download the free map digital spatial data shown on this map.

**EXPLANATION**

This map displays 2008 U.S. Geological Survey (USGS) High Resolution orthophotography for the Wilton, Fairfield and New Canaan area. Orthophotography data is also available in the form of a map layer, an orthophotoquilt, and a digital dataset. This data provides support in property line review, planning, and other tasks. It is also provides support in property line review, environmental monitoring, and other applications. The street network is not color balanced so visual differences between individual input images will cause differences in the image and intensity of colors depending on the area viewed. The location and shape of features in other GIS layers will not exactly match information shown in the orthophotography primarily due to differences in spatial accuracy and date collection dates. Street data such as major roads and minor roads are displayed with an extra 30% buffer. Also shown are airports, hospitals, educational facilities, train stations, and more. Important geographic locations and boundaries are labeled.
