This map portrays 2008 U.S. Geological Survey (USGS), High Resolution orthophotography for the Wallingford, North Haven and New Haven area in natural color, leaf off (0.0305 meter) imagery. The aerial survey was taken during the Spring of 2008 and is an important tool for the planning. It also provides support in property tax review, environmental monitoring as well as other applications. The orthophoto mosaic is not color balanced so tonal variations between individual input images are not controlled which will cause differences in the range and intensity of colors depending on the area viewed. The location and shape of features in other GIS layers will not exactly match information shown in the aerial photography primarily due to differences in spatial accuracy and scale calibration data. Shaded relief data such as slope and aspect are displayed but the location of each feature may differ from the orthophotography. Also shown are airports, hospitals, educational facilities, train stations, and town boundaries. Important geographic locations and boundaries are labeled.

DATA SOURCES
ORTHOPHOTOGRAPHY - Provided by the U.S. Geological Survey.
BASE MAP DATA - All data is based on 1:24,000 scale and displays geographic names, places and their symbols, town boundaries airports, and railroads. These data sets are relative current and complete. Street data where available is used for the map data.
MAPS AND DIGITAL DATA - Visit the CT DEP website for this map and a variety of others in PDF format. Visit the CT DEP website to download the base map digital spatial data shown on this map.

Map prepared by CT DEP. December 2010.
Printed from high and accurate.
