2008 Color Orthophoto Leaf-Off
Westbrook, CT

EXPLANATION
This map depicts 2008 U.S. Geological Survey (USGS), High Resolution Orthophotography for the Bridgeport, Stratford, and Fairfield area; in colored leaf off, Tree (1:5,700 scale) imagery. The multi-source, non-manual processing of this data is done such that the map is an approximate representation of the area at the time of the photograph. It also provides support in property tax review, environmental monitoring, as well as other applications. The resolution metric is not color balanced so tonal differences between individual input images can cause differences in the shade and intensity of colors depending on the area viewed. The location and shape of features in other GIS layers will not exactly match information shown in the aerial photography primarily due to differences in spatial accuracy and data collection dates. Some data such as streets, names, and others are displayed but the locations of such features may differ from the orthophotography. Also shown are schools, recreation facilities, state stations, and some businesses. Important geographic locations and waterbodies are labeled.

DATA SOURCES
ORTHOPHOTOGRAPHY - Provided by the U.S. Geological Survey.
BASE MAP DATA - All data is based on 1:1,000 scale and displayed geographic names, places and their symbols, towns boundaries, airports, etc. View the CT DRI website for more details.
MAPS AND ORTHOPHOTO - Visit the CT DRI website for this map and a variety of others in PDF format. Visit the CT DRI website to download the free map digital spatial data shown on this map.

Map prepared by CT DRI. December 2010. Map is not colorfast. Printed from high resolution.
