This map displays 2010 National Agriculture Imagery Program (NAIP) orthophotography for the State of Connecticut. It is a natural color, false color, 0.59-foot (1-meter) aerial survey taken in the spring of 2010. The orthophoto mosaic is not color-balanced, so total brightness between individual input images is not corrected. This will cause differences in the range and intensity of colors depending on the area viewed. The location and shape of features in other GIS layers will not exactly match information shown in the aerial photography primarily due to differences in spatial accuracy and date collection dates. Street-level data such as major interstate, US routes, state routes, driveways, railroads, and ferry crossings are displayed on the orthophotography. Also shown are airports, hospitals, educational facilities, train stations, and town boundaries. Important geographic locations and waterbodies are labeled.

EXPLANATION

DATA SOURCES

ORTHOPHOTOGRAPHY - National Agriculture Imagery Program (NAIP), is provided by the USDA Crop Service Agency through the NAIP Photograph Field Office in Salt Lake City.

BASE MAP DATA - All data is based on USGS quad and duplicates geographic names, places and their symbols, town boundaries, highways, and railroads. Data used does not represent complete geographic data.

MAPS AND DIGITAL DATA - Visit the CT ECO website for this map and a variety of others in PDF format. You can also download the base maps and digital data from the site.

Important geographic locations and waterbodies are labeled.
