This map displays 2010 National Agriculture Imagery Program (NAIP) orthophotography for the State of Connecticut. It is a natural color, false color 5.59-foot (1 meter) aerial survey taken in the Spring of 2010. The multispectral mosaic is not color-balanced so tonal balance between individual input images is not corrected. This will cause differences in the range and intensity of colors depending on the area viewed. The location and shape of features in other GIS layers will not exactly match information shown in the aerial photography primarily due to differences in spatial accuracy and data collection dates. Street-level data such as major interstates, US routes, state routes, streets, railways, and ferry crossings are displayed but may not match the locations of such features on the orthophotography. Also shown are airports, hospitals, educational facilities, train stations, and town boundaries. Important geographic locations and waterbodies are labeled.

DATA SOURCES

ORTHOPHOTOGRAPHY - National Agriculture Imagery Program (NAIP), is provided by the USGS Farm Service Agency through the NAIP Photograph Field Office in Salt Lake City.
BASE MAP DATA - All data is based on USGS scale and displays geographic names, places and their coordinates, town boundaries, political, and natural. These data layers are neither current nor complete. Street data is based on Telocolor orthophotographed data.
MAPS AND DIGITAL DATA - Visit the CT DEP website for the map and a variety of other maps in PDF format. Visit the Environmental Protection Agency's website fororthophotography from other states and other years.
