This map displays 2010 natural color orthophotography covering areas of coastal Connecticut. The data includes shorelines, all offshore islands, and the Connecticut River to the Massachusetts state line. The data was collected between June 18th and 19th, 2010, when the tidal stage was ~ -1 hour of the predicted low tide. Since it was collected during the growing season, the data is likely to depict the resolution of green vegetation. The map does not depict permanent water features or airports. The 2010 orthophotography used to produce this map has a ground resolution of 1 foot (30.5 meter) per image pixel. Additional GIS data displayed includes major interstates, U.S. routes, state routes, streets, ferry routes, airports, hospitals, educational facilities, rail stations, and town boundaries. Important geographic locations and topography are labeled. The location and shape of features in the GIS layers may not exactly match information shown in the aerial photography primarily due to differences in spatial accuracy and data collection dates.

DATA SOURCES

ORTHOPHOTOGRAPHY: Imagery compiled by PlanetLabs, Inc. and published by the DEP Office of Land Management.

BASE MAP/LAYERS: All data is based on 1:24000 scale and depicts geographic names, places and their symbols, state boundaries, airports, and railroads. Base map data is neither current nor complete. Street data is based on TeleAtlas copyrighted data.
