DATA SOURCES

ORTHOPHOTOGRAPHY - Imagery compiled by PhotoScience, Inc., and published by the DEP Office of Long Island Programs.

BASE MAP DATA - All data is based on 1:50,000 scale and displays geographic names, places and administrative, county, township, and provincial. Base map data is not current nor complete. Street data is based on tables in copyrighted data.

MAPS AND DIGITAL DATA - Visit the CT DEP website for this map and a variety of others in PDF format. Visit the CT DEP website to download base map digital topographic data shown on this map.

EXPLANATION

This map displays 2010 natural color orthophotography covering areas of coastal Connecticut within 1,000 feet of the shoreline and regulated tidal wetlands, all offshore islands, and the Connecticut River in the Massachusetts state line. The data was collected between June 15th and 19th, 2010, when the tidal stage was ±1 hour of the predicted high or low tide. Since it was collected during the growing season, the data is subject to seasonal growth and, therefore, obscures some ground features. The 2010 orthophotography used to produce this map has a ground resolution of 1 foot (0.305 meter) per image pixel. Additional GIS data displayed includes major interstates, U.S. routes, major routes, streams, ferry crossings, airports, hospitals, educational facilities, rail stations, and town boundaries. Important geographic locations and transportation are labeled. The location and shape of features in the GIS layers may not exactly match information shown in the aerial photography primarily due to differences in spatial accuracy and data collection dates.
