EXPLANATION
This map displays 2010 natural color orthophotography covering areas of coastal Connecticut within 1,000 feet of the shoreline and registered tidal wetlands, all offshore islands, and the Connecticut River to the Massachusetts state line. The data was collected between June 18th and 19th, 2010, when the tidal stage was -1 hour of the predicted low tide. Since it was collected during the growing season, the data is representative of a normal growing season. This data is not intended for scientific, legal, or engineering applications. The 2010 orthophotography used to produce this map has a ground resolution of 1 foot (30-50 meters) per image pixel. Additional GIS data displayed includes major interstates, US routes, state routes, streets, fully cornered airports, hospitals, educational facilities, rail stations, and town boundaries. Important geographic locations and landmarks are labeled. The location and shape of features in the GIS layers may not exactly match information shown in the aerial photography primarily due to differences in optical accuracy and data data collection dates.

DATA SOURCES
ORTOPHOTOGRAPHY - Imagery compiled by PlanetLabs, Inc. and published by the DEP Office of Geographic Information.
BASE MAP DATA - All data is based on the 1:24,000 scale and displays geographic names, places and their symbols, state boundaries, cities, and railroads. Base map data is neither current nor complete. Street data is based on Telocart copyrighted data.
MAPS AND DIGITAL DATA - Visit the CT DEP website for this map and a variety of others in the future. Visit the CT DEP website to download the base map digital hybrid data shown on this map.
