2010 Coastal Natural Color Orthophoto
Enfield, CT

EXPLANATION
This map displays 2010 natural color orthophotography covering areas of coastal Connecticut within 1,000 feet of the shoreline and riprap. The image products were collected between June 15th and 19th, 2010, when the tidal stage was +/- 1 hour of the predicted high tide. The data was collected during the growing season, the data is represented in the shapefile. The data is derived from a digital orthophotography archive. This orthophotographic data used to produce this map has a ground resolution of 1 foot (0.305 meter) per image pixel. Additional GIS data displayed includes major interstates, US routes, state routes, streets, ferry crossings, airports, hospitals, educational facilities, rail stations, and town boundaries. Important geographic locations and boundaries are labeled. The location and shape of features in the GIS layers may not exactly match information shown in the aerial photography primarily due to differences in spatial accuracy and data collection dates.

DATA SOURCES
ORPHOTOPGRAPHY: Imagery compiled by Planet/Defense, and published by the DEP Office of Coastal Zone Management.
BASE MAP DATA: All data is based on USGS 1:24000 scale and displays geographic names, places and their symbols, town boundaries, airports, and facilities. Each map data is neither current nor complete. Street data is based on TeleAtlas copyrighted data.

MAPS AND DIGITAL DATA: Visit the CT DEP website for this map and a variety of other maps, data and tools. Visit the CT DEP website to download the base map digital dataset from the website.
