DATA SOURCES

ORTHOPHOTOGRAPHY - Imagery compiled by PlanetImage, Inc. and published by the DEP Office of Coastal Zone Management.

BASE MAP DATA - All data is based on USGS 1:24,000-scale and displays geographic elements, places and their attributes using contours, orthorectified and other image data. Base map data is neither corrected nor complete. Street data is based on TeleAtlas copyrighted data.

MAPS AND DIGITAL DATA - Visit the CT DEP website for this map and a variety of others in PDF format. Visit the CT DEP website to download the base map digital spatial data shown on this map.

EXPLANATION

This map displays 2010 natural color orthophotography covering areas of coastal Connecticut within 1,000 feet of the shoreline and regulated tidal wetlands, all offshore islands, and the Connecticut River to the mouth of coastal Connecticut within 1,000 feet of the shoreline and regulated tidal wetlands. This map was created by the DEP Office of Coastal Zone Management. The data was collected between June 15th and 19th, 2010, when the tidal stage was ∼1 hour of the predicted low tide. Hence it was collected during the growing season, the data is considered to be representative of the land cover and water surface characteristics observed at that time. The 2010 orthophotography used to produce this map has a ground resolution of 1 foot (0.305 meter) per image pixel. Additional GIS data displayed includes major interstates, US routes, state routes, streets, ferry crossings, airports, hospitals, educational facilities, rail stations, and town boundaries. Important geographic locations and transportation are labeled. The location and shape of features in the GIS layers may not exactly match information shown in the aerial photography primarily due to differences in spatial accuracy and data collection dates.
