This map displays 2010 natural color orthophotography covering areas of coastal Connecticut within 1,500 feet of the shoreline and navigable tidal waters, all offshore islands, and the Connecticut River to the Massachusetts state line. The data was collected between June 18th and 19th, 2010, when the tidal stage was ~0.5 hour of the predicted low tide. Since it was collected during the growing season, the data is categorized as “leaf-on” orthophotography in which vegetation cover is dominant. The data is subject to errors in some areas. The 2010 orthophotography used to produce this map has a ground resolution of 1 kilo (30-30 meters) per image pixel. Additional GIS data displayed includes major interstates, US routes, state routes, streams, body coverages, airports, hospitals, educational facilities, rail stations, and town boundaries. Important geographic locations and transportation are labeled. The location and shape of features in the GIS layers may not exactly match information shown in the aerial photography primarily due to differences in spatial accuracy and data collection dates.

DATA SOURCES
ORTOPHOTOGRAPHY: imagery compiled by Photocom, Inc., and published by the DEP, Office of Long Island Programs.
BASE MAP DATA: All data is based on 1:12,500 scale and displays geographic names, places and their boundaries, towns, features, airports, and waterbodies. Data map data is subject to errors in some areas. The data is subject to errors in some areas.
MAPS AND DIGITAL DATA: Visit the CT DEP website for this map and a variety of others in the series. Visit the CT DEP website to download the base map digital spatial data shown on this map.
