This map displays 2010 natural color orthophotography covering areas of coastal Connecticut within 1000 feet of the shoreline and regulated tidal wetlands, all offshore islands, and the Connecticut River to the Massachusetts state line. The data was collected between June 15th and 19th, 2010, when the tidal stage was 0 - 1 hour of the predicted tide time. Since it was collected during the growing season, the data is cloud-free and allows for the accurate display of land features and agricultural areas. The 2010 orthophotography used to produce this map has a ground resolution of 3 feet (0.91 meters) per image pixel. Additional GIS data displayed includes major interstates, US routes, county routes, streets, and airport runways, airports, hospitals, educational facilities, rail stations, and town boundaries. Important geographic locations and symbols are indicated. The location and shape of features in the GIS data may not exactly match information shown in the aerial photography primarily due to differences in spatial accuracy and data collection dates.

DATA SOURCES
ORTHOPHOTOGRAPHY: Imagery compiled by Photolucence, Inc., and published by the DEP (Office of Long Island Programs).
BASE MAP DATA: All data is based on 1:24,000 scale and displays geographic names, places and their symbols. Community boundaries, airports, and railroads. Base map data is neither current nor complete. Street data is based on TeleAtlas copyrighted data.
MAPS AND DIGITAL DATA: Visit the CT ECO website for this map and a variety of others in PDF format. Visit the CT DEP website to download the base map digital shapefile data shown on this map.
