2010 Coastal Natural Color Orthophoto
Middletown, CT
(Northwest)

EXPLANATION
This map displays 2010 natural color orthophotography covering areas of coastal Connecticut within 1000 feet of the shoreline and regulated tidal wetlands, all offshore islands, and the Connecticut River to the Massachusetts state line. The data was collected between June 19th and 19h, 2010, when the tidal stage was +/- 1 hour of the predicted tide time. Since it was collected during the growing season, the data is obscured some ground features. The 2010 orthophotography used to produce this map has a ground resolution of 1/4 ft (0.03 meter per image pixel). Additional GIS data displayed includes major interstates, US routes, state routes, streams, ferry crossings, airports, hospitals, educational facilities, train stations, and town boundaries. Important geographic locations and vegetation are labeled. The location and shape of features in the GIS layers may not exactly match information shown in the aerial photography primarily due to differences in spatial accuracy and data collection dates.

DATA SOURCES
ORTHOPHOTOGRAPHY - Imagery compiled by PlanetLabs, Inc. and published by the ERP Office of Crop Based Programs.
BASE MAP DATA - All data is based on 1:24,000 scale and displays geographic names, places and other symbols from Connecticut, state and federal. Base map data is neither current nor complete. Street data is based on TeleAtlas copyrighted data.
MAPS AND DIGITAL DATA - Visit the CT DEP website for this map and a variety of other as in PDF format. Visit the CT DEP website to download the base map digital data shown on this map.

Map prepared by CT DEP, April 2011. Map is not suitable for legal or title use.
