This map displays 2010 natural color orthophotography covering areas of coastal Connecticut within 1.0 mile of the shoreline and registered tidal wetlands, all offshore islands, and the Connecticut River to the Massachusetts state line. The data was collected between June 18th and 19th, 2010, when the tidal stage was below low tide. Since it was collected during the growing season, the data is subject to color distortion and may be biased toward vegetative areas. The 2010 orthophotography used to produce this map has a ground resolution of 1 foot (0.305 meter) per image pixel. Additional GDB data displayed includes major interstates, US states, major routes, streets, ferry crossings, airports, hospitals, educational facilities, mail routes, and town boundaries. Important geographic locations and transportation are labeled. The location and shape of features in the GDB layers may not exactly match information shown in the aerial photography primarily due to differences in spatial accuracy and data collection dates.

DATA SOURCES

ORTHOPHOTOGRAPHY: Imagery compiled by PlanetLabs, Inc. and published by the TRF Office of Land-based Programs.

BASE MAP DATA: All data is based on USGS data and displays geographic names, places and their subclasses (towns, locations, airports, and highways). Base map data is neither current nor complete. Street data is based on TeleAtlas copyrighted data.

MAPS AND DIGITAL DATA: Visit the CT ECO website for this and a variety of others in PDF format. Visit the CT ECO office to download the base map digital data sheet from this map.
