This map displays 2010 natural color orthophotography covering areas of coastal Connecticut within 1,000 feet of the shoreline and registered tidelands, all islands, and the Connecticut River to the Massachusetts state line. The data was collected between June 15th and June 19th, 2010, when the tidal stage was +/− 1 hour of the predicted low tide. Since it was collected during the growing season, the data is categorized as "leaf-on" orthophotography in which vegetation obscures some ground features. The 2010 orthophotography used to produce this map has a ground resolution of 1 foot (0.305 meter) per image pixel. Additional GIS data displayed includes major interstates, US routes, state routes, streets, ferry crossings, airports, hospitals, educational facilities, train stations, and town boundaries. Important geographic locations and transportation are labeled. The location and shape of features in the GIS layers may not exactly match information shown in the aerial photography primarily due to differences in spatial accuracy and data collection dates.

DATA SOURCES

ORTHOPHOTOGRAPHY: Imagery compiled by Planetima Inc. and published by the CT Dep of Environ. Protection.

BASE MAP DATA: All data is based on USGS data and displays geographic names, places and their boundaries, roads, transportation, utilities, and waterbodies. Data map data is neither current nor complete. Street data is based on TeleAtlas copyrighted data.
