This map displays 2010 natural color orthophotography covering areas of coastal Connecticut within 1000 feet of the shoreline and regulated tidal wetlands, all offshore islands, and the Connecticut River to the Massachusetts state line. The data was collected between June 15th and 19th, 2010, when the tidal stage was within one hour of the predicted low tide. Since it was collected during the growing season, the data is subject to seasonal variations during the growing season. The map images are subject to environmental factors. The 2010 orthophotography used to produce this map has a ground resolution of 1 foot (0.305 meters) per image pixel. Additional GIS data displayed includes major interstates, US routes, major roads, streams, rocky outcrops, airports, hospitals, educational facilities, rail stations, and town boundaries. Important geographic locations and their boundaries are labeled. The location and shape of features in the GIS layers may not exactly match information shown in the aerial photography primarily due to differences in spatial accuracy and data collection dates.

DATA SOURCES
ORTHOPHOTOGRAPHY: Imagery compiled by Photocore, Inc. and published by the DEP Office of Coastal Programs.
BASE MAP DATA: All data is based on 1:24,000 scale and displays geographic names, places and other symbols (town boundaries, airports, and railroads). Base map data is further corrected and compiled. Street data is based on Orthoimages/orthophotos data.
MAPS AND DIGITAL DATA: Visit the CT DEP website for this map and a variety of others in PDF format. Visit the CT DEP website to download the base map digital spatial data shown on this map.
