This map displays 2010 natural color orthophotography covering areas of coastal Connecticut within 1,000 feet of the shoreline and adjacent tidal wetlands, all offshore islands, and the Connecticut River to the Massachusetts state line. The data was collected between June 18th and 19th, 2010, when the tidal stage was 0° to 1 hour of the predicted low tide. Since it was collected during the growing season, the data is subject to more seasonal limitations and objects may not be as accurate as data from the dry season. The 2010 orthophotography used to produce this map has a ground resolution of 1 foot (0.305 meter) per image pixel. Additional GIS data displayed includes major interstates, US routes, state routes, streets, ferry routes, airports, hospitals, educational facilities, train stations, and town boundaries. Important geographic features and transformation are labeled. The location and shape of features in the GIS layers may not exactly match information shown on this aerial photograph primarily due to differences in spatial accuracy and data collection dates.

DATA SOURCES
ORTHOPHOTOGRAPHY: Imagery compiled by Photoluxx, Inc. and published by the DEP Office of Long Island Programs.
BASE MAP DATA: All data is based on USGS data and displays geographic names, places and their symbols, route designations, airports, and railroads. Base map data is not current or complete. Street data is based on Telco's copyrighted data.
MAPS AND DIGITAL DATA: Visit the CT DEP website for this map and a variety of others at www.ct.gov. Visit the DEP online store to download this map digital data in various formats.
