This map displays 2010 natural color orthophotography covering areas of coastal Connecticut in 1,000 feet of the shoreline and registered tidal wetlands, all offshore islands, and the Connecticut River to the Massachusetts state line. The data was collected between June 15th and 19th, 2010, when the tidal stage was ~1 hour of the predicted low tide. Data that was collected during the growing season, the data is subject to natural variations influencing the appearance of vegetation and other green features. The 2010 orthophotography used to produce this map has a ground resolution of 1 foot (0.305 meter) per image pixel. Additional GIS data displayed includes major interstates, US routes, state routes, streets, ferry crossings, airports, hospitals, educational facilities, train stations, and town boundaries. Important geographic locations and transportation are labeled. The location and shape of features in the GIS layers may not exactly match information shown in the aerial photography primarily due to differences in spatial accuracy and data collection dates.

DATA SOURCES
ORTHOPHOTOGRAPHY: Imagery compiled by Planet/Science, Inc. and published by the ERG Office of Living Resource Programs.
BASE MAP DATA: All data is based on U.S.G.S. scale and displays geographic names, places, and other symbols (state, counties, cities, towns, and other). Base map data is neither current nor complete. Street data is based on Microsoft's copyrighted data.
MAPS AND DIGITAL DATA: Visit the CT DCR website for this map and a variety of others in PDF form. Visit the CT DCR website to download the base-map digital topographic data shown on this map.
