EXPLANATION

This map displays 2010 natural color orthophotography covering areas of coastal Connecticut within 1,000 feet of the shoreline and registered tidal wetlands, all off-shore islands, and the Connecticut River to the Massachusetts state line. The data was collected between June 18th and June 19th, 2010, when the tidal stage was ~1 hour prior to the predicted low tide. Since it was collected during the growing season, the data is categorized as "leaf-on" orthophotography in which vegetation obscures some ground features. The 2010 orthophotography used to produce this map has a ground resolution of 1 foot (30.5 mm) per image pixel. Additional GIS data displayed includes major interstates, US routes, state routes, streams, ferry crossings, airports, hospitals, educational facilities, train stations, and town boundaries. Important geographic features and boundary lines are included. The location and shape of features in the GIS layers may not exactly match information drawn on the aerial photography precisely due to differences in spatial accuracy and data collection dates.

DATA SOURCES

ORTHOPHOTOGRAPHY: Imagery compiled by Philomathix, Inc., and published by the IRS (Office of Living Island Program).
BASE MAP DATA: All data is based on USGS data and displays geographic names, places and their symbols, towns, boundaries, airports, and waterbodies. Basemap data is neither current nor complete. Street data is based on Multicolor aggregated data.
MAPS AND DIGITAL DATA: Visit the CT DEP website for this map and a variety of others at DEP servers. Visit the CT DEP website to download the base-map digital imagery data shown on this map.

Map prepared by CT DEP, April 2011. Map is not intended for legal interpretation.
