EXPLANATION

This map displays 2010 natural color orthophotography covering areas of coastal Connecticut within 1/4 mile of the shoreline and navigable tidal waters, all islands, islands, and the Connecticut River to the Massachusetts state line. The data was collected between 2010 and 1984, when the tile map was 1 hour of the predicted tide date. Since it was collected during the growing season, the data is current in the growing season and reflects the growing season's vegetation as opposed to some ground features. The 2010 orthophotography used to produce this map has a ground resolution of 1 foot (30 cm) per image pixel. Additional GIS data displayed includes major interstates, US routes, county routes, state, city, town, and county boundary, hospitals, educational facilities, rail stations, and town boundaries. Important geographic locations and landmarks are included. This location and shape of features in the GIS layers may not exactly match information shown on the actual photography primarily due to differences in global accuracy and data collection dates.

DATA SOURCES

ORTHOPHOTOGRAPHY: Imagery compiled by Planetarium Inc. and published by the DEP Office of Brownstone Programs. BASE MAP/HYDRAULIC DATA: All data is based on 1:24,000 scale display geographic names, places and their symbols, town boundaries, rivers, and roads. Some map data is neither current nor complete. Street data is based on a file data copyrighted data.

MAPS AND DIGITAL DATA: Visit the CT DEP website for the map and a variety of data in PDF format. Visit the CT DEP website to download the base map digital ortho data shown on this map.
