This map displays 2010 natural color orthophotography covering areas of coastal Connecticut within 1,000 feet of the shoreline and regulated tidal wetlands, all offshore islands, and the Connecticut River to the Massachusetts state line. The data was collected between June 13th and 19th, 2010, when the tidal stage was 0-1 hour of the predicted low tide. Since it was collected during the growing season, the date is also affected by vegetation growth and tidal conditions, which obscures some natural features. The 2010 orthophotography used to produce this map has a ground resolution of 1 foot (30.5 meters) per image pixel. Additional GIS data displayed includes major interstates, U.S. routes, state routes, streets, ferry crossings, airports, hospitals, educational facilities, rail stations, and town boundaries. Important geographic locations and transportation are labeled. The location and shape of features in the GIS layers may not exactly match information shown in the aerial orthophotography primarily due to differences in spatial accuracy and data collection dates.

DATA SOURCES

ORTHOPHOTOGRAPHY - Imagery compiled by Photocromix, Inc., and published by the DEP Office of Coastal Programs.
BASE MAP DATA - All data is based on USGS data and displays geographic names, places and other standard vector locations, shapes, and symbols. Base map data is neither current nor complete. Street data is based on TeleAtlas copyrighted data.
MAPS AND DIGITAL DATA - Visit the CT DEP website for the map and a variety of other new or updated maps. Visit the CT DEP website to download the base map digital data shown on this map.
