This map displays 2010 natural color orthophotography covering areas of coastal Connecticut within 1,000 feet of the shoreline and suggested tidelands, all offshore islands, and the Connecticut River to the Massachusetts state line. The data was collected between June 15th and 19th, 2010, when the tidal stage was ~1 hour of the predicted low tide. Since it was collected during the growing season, the data is obscured by vegetation, and objects on the ground surface are blocked from view. The 2010 orthophotography used to produce this map has a ground resolution of 1 foot (0.305 meter) per pixel. Additional GIS data includes major interstates, US routes, major rivers, streams, ferry crossings, airports, hospitals, educational facilities, mail stations, and town boundaries. Important geographic locations and landmarks are labeled. The location and shape of features in the GIS layers may not exactly match information shown in the aerial photography primarily due to differences in spatial accuracy and data collection dates.

DATA SOURCES
ORTHOPHOTOGRAPHY: Imagery compiled by Photolux Imaging, Inc. and published by the DEEP Office of Long Island Programs.
BASE MAP DATA: All data is based on USGS and displays geographic names, places and their symbols, town boundaries, airports, and railroads. Base map data is neither current nor complete. Street data is based on Strada's copyrighted data.
MAPS AND DIGITAL DATA: Visit the CT DEP website for the map and a variety of other maps in PDF format. Visit the CT DEP website to download the base map digital data shown on this map.

EXPLANATION

Map prepared by CT DEP, April 2011. 
Map is not professional. 
Protect from light and moisture.
