EXPLANATION

This map displays 2010 coastal natural orthophotography covering areas of coastal Connecticu within 1000 ft of the shoreline and rippled tidal wetlands, all saltmarshes, and the Connecticut River to the Massachusetts state line. The data was collected between June 10th and 19th, 2010, when the tidal stage was +/- 1 hour of the predicted tide. This data was collected during the growing season. The data is captured at 1:1000 scale (1" = 1000 ft) and at 1' resolution for objects above ground features. The 2010 orthophotography used to produce this map has a ground resolution of 1 ft (30 cm) per image pixel. Additional GIS data displayed includes major interstates, US routes, state routes, streams, ferry crossings, airports, hospitals, educational facilities, train stations, and town boundaries. Important geographic locations and water bodies are labeled. The location and shape of features in the GIS layers may not exactly match information shown in the actual photography primarily due to differences in spatial accuracy and data collection dates.

DATA SOURCES

ORTHOPHOTOGRAPHY: Imagery compiled by Photolence Inc. and published by the DEP Office of Long Island Programs.

BASE MAP/DATA: All data is based on USGS data and displays geographic names, places and their symbols, state boundaries, airports, and seashore. Base map data is not current or complete. Street data is based on WayBases copyrighted data.
