This map displays 2010 color infrared orthophotography covering areas of coastal Connecticut within 1,800 ft of the shoreline and regulated tidal wetlands, all offshore islands, and the Connecticut River to the Massachusetts state line. Color infrared photography, often called "false color," is useful for interpreting several resources. The data was collected between June 15th and 19th, 2010, when the necessary atmospheric conditions prevailed. The time of year the data was collected affects the land features shown. This map is not colorfast, that is, the colors shown may not exactly match information shown in the aerial photography. Therefore, it is important to use this information with the original orthophotography or related resources.

DATA SOURCES

ORTHOPHOTOGRAPHY: Imagery compiled by Planet/Lens, Inc., and published by the DEP Office of Long Island Programs.

BASE MAP DATA: All data is based on U.S.GS 1:24,000-scale geography maps and digital data. Geographic Names Information System (GNIS) names were used to generate the base map. The data is neither current nor complete. Stone markers and other features were used to generate the base map.

MAPS AND DIGITAL DATA: Visit the CT DEP website for this map and a variety of others in PDF format. Visit the CT DEP website to download the base map digital spatial data shown on this map.
