The 2010 orthophoto has a ground resolution of 1 foot (0.305 meter) per image pixel. Additional GIS data displayed include major interstates, US routes, state routes, streets, ferry crossings, airports, hospitals, educational facilities, train stations, and town boundaries. Important geographic locations and waterbodies are also labeled. The location and shape of features in the GIS layer may not exactly match information shown in the aerial photography precisely due to differences in spatial accuracy and data collection dates.

DATA SOURCES

ORTHOPHOTOGRAPHY: Imagery compiled by Photocore Inc. and published by the DEP Office of Long Island Programs.

BASE MAP DATA: All data is based on 1:24,000 scale and displays geographic names, places and their symbols, town boundaries and topography. Base map data is neither current nor complete. Terrain data is based on USGS topographic data.

MAPS AND DIGITAL DATA: Visit the DEP website for this map and a variety of others in PDF format. Visit the CT DEP website to download this base map digital native data shown on this map.
